Squiggout Web Designs, LLC

Why Host Microsoft Exchange 2010 with Squiggout?

When looking to implement or outsource Microsoft Exchange, there are several key factors to consider. Is the service reliable? Are there engineers on standby 24/7 in case a server goes down? Does the service offer the full benefits of Exchange?

Reliability, Uptime, and 24/7 Monitoring and Management

We offer **99.999 percent uptime**, which means less than six minutes of downtime a year, as well as the industry's first **100 percent data protection guarantee**.

Our customers' data is replicated in real-time twice in one data center and at speed-of-wire a third time to another of our geographically dispersed data centers. For added protection and rapid point-in-time restores, regular database "snapshots" are taken in each data center. This architecture protects customer data in the event of hardware failure, database corruption, or even a catastrophic data center loss. Because data is replicated across "live" working data centers, customer access to the full functionality of their Exchange environment in the event of a disaster can be restored in a timely manner.

Add-on Features

We offer a complete range of add-on features including **hosted BlackBerry and ActiveSync** for Windows mobile devices so you can instantly activate email service for your handheld. Rather than spending thousands of dollars on your own server, you can use our managed service for just a few dollars a month.

You can also add **SharePoint 2010** for document collaboration; **Office Communications Server** for increased productivity through secure instant messaging; and file sharing and **archiving**—from simple message journaling to keep an exact copy of all your message, to compliant archiving (which fulfills regulatory requirements from the main U.S. regulations—HIPAA, GLBA, SOX, SEC, FINRA and FRCP as well as other state/federal requirements).

PC or Mac

Many Exchange hosting companies do not offer both Outlook (for PC) and Entourage (for Mac) support. We offer a **free download** of both, so your staff can use either PCs or Macs, or both. We also offer free Outlook Web Access which allows your users the ability to access their email online from anywhere in the world.

Strict Security and Compliance

Squiggout adheres to the industry's strictest regulations for security and compliance. We are PCI compliant and SAS 70 Type II audited.

- **SAS 70 Certification:** SAS 70 is an auditing statement issued by the Auditing Standards Board of the American Institute of Certified Public Accountants (AICPA), officially titled "Reports on the Processing of Transactions by Service Organizations." SAS 70 defines the professional standards used by a service auditor to assess the internal controls of a service organization and issue a service auditor's report.
- **PCI Compliant:** As a Payment Card Industry (PCI) compliant company we meet the guidelines set forth by the major credit card companies as a guideline to help organizations that process card payments prevent credit card fraud, hacking and various other security issues. A company processing, storing, or transmitting credit card numbers must be PCI compliant or they risk losing the ability to process credit card payments.

What does all this mean? It means your company does not need to have its own Exchange server or any servers. Gone are the headaches and maintenance. Try it for FREE for 30 days, use promo code: squiggexchange during sign up.

Now Anyone Can Be An I.T. Professional

Renting software and server space is the fastest, most reliable way to set up your company's network. Get it customized, access it anywhere in the world, and pay a fraction of the cost.
